Solution Requirements

Date	24 June 2026
Team ID	xxxxxx
Project Name	Credit Card Approval Prediction
Maximum Marks	4 Marks

Define Functional and Non-Functional Requirements:

Create a comprehensive list of requirements to define exactly what your solution will do and how well it will perform.

- **Functional Requirements (FR)** define specific behaviors, functions, or features of the system (What the system should *do*).
- **Non-Functional Requirements (NFR)** specify the criteria that judge the operation of a system, rather than specific behaviors (How the system should *be*).

Fill out the descriptions and necessary details for each category provided below.

Step 1: Functional Requirements (FR)

S.No	Requirement Category	Requirement Description	Priority (High/Medium/Low)
1	Authentication	The system allows secure login for the Bank Credit Analyst, Compliance Officer, and Admin. Customers can access the eligibility check without an admin account (if applicable).	High
2	Authorization levels	Different users have different permissions. Analysts can review predictions, Compliance Officers can identify high-risk applicants, and Admins	High

		can manage the system.	
3	External interfaces	The system integrates with the Flask web application and IBM Watson Machine Learning for cloud-based prediction services.	High
4	Transactions processing	The system accepts applicant details, preprocesses the data, predicts credit card approval using the trained ML model, and displays the result.	High
5	Reporting	The system stores applicant details and prediction results for future review and analysis.	Medium
6	Business rules, etc.	The prediction is generated based on financial and demographic information using the trained machine learning model.	High
7	Compliance to laws or regulations	The system securely stores applicant data and follows banking data privacy standards.	High
8	*Other*	The system supports model updates and maintains prediction history.	Medium

Step 2: Non-Functional Requirements (NFR)

S.No	NFR Category	Requirement Description	Target Metric / Acceptance Criteria
1	Performance & Speed	The system should provide prediction results quickly.	Response time less than **2 seconds**
2	Scalability	The system should support many users simultaneously.	Supports **1000+ concurrent users**
3	Security & Data Privacy	Applicant information should be securely stored and transmitted.	HTTPS communication and encrypted data storage
4	Reliability & Availability	The application should be available with minimal downtime.	99.9% uptime
5	Usability & Accessibility	The interface should be simple, user-friendly, and responsive.	Easy navigation and mobile-friendly design
6	Other	The system should be easy to maintain and update with new machine learning models.	Easy deployment and regular model updates
