

Project Initialization and Planning Phase

Date	24 June 2026
Team ID	XXXXXX
Project Name	Credit Card Approval Prediction
Maximum Marks	3 Marks

Define Problem Statements :

Banks and financial institutions face challenges in efficiently processing large volumes of credit card applications while maintaining accuracy and consistency. Manual evaluation is time-consuming, error-prone, and unable to scale with increasing demand. There is a need for an intelligent machine learning-based system that can accurately predict credit card approval decisions using applicants' financial and demographic information. Such a solution will help banks reduce processing time, improve decision-making, identify high-risk applicants, and provide customers with instant eligibility predictions through a user-friendly web application.

Example:

I am	I'm trying to	But	Because	Which makes me feel	
Applicant seeking a loan	Secure a loan for property	Married with no co-applicant income	Self-employed with a good credit history	Optimistic about loan approval	
Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	A male applicant seeking a loan.	Secure a loan for the property	Married with no co-applicant income.	Self-employed with a good credit history.	Optimistic about loan approval.
